

Expanded opportunities within one fund

Aiming for higher returns and yield than traditional benchmark products, the fund's all-in-one fixed-income strategy provides exposure to six diversified sectors across the fixed-income spectrum.

Focus on yield, quality and liquidity

Informed by our expertise as a fixed-income manager, rules-based filters screen the bond investment universe striving for a better balance of yield, quality and liquidity.

Income potential in all markets

The fund's disciplined investment approach has the potential to help generate consistent income – even in an uncertain interest rate environment.

Fund Objective

Columbia Diversified Fixed Income Allocation ETF (the Fund) seeks investment results that, before fees and expenses, closely corresponds to the performance of the Beta Advantage® Multi-Sector Bond Index.

Index Description

The **Beta Advantage® Multi-Sector Bond Index** is rules-based multi-sector strategic beta approach to measuring the performance of the debt market through representation of six sectors, each focused on yield, quality, and liquidity of the particular eligible universe. The index will have exposure to the following six sectors of the debt market: U.S. Treasury securities; global ex-U.S. treasury securities; U.S. agency mortgage-backed securities; U.S. corporate investment-grade bonds; U.S. corporate high-yield bonds; and emerging markets sovereign debt. The Fund uses a representative approach which will result in the Fund holding a smaller number of securities than are in the underlying index. It is not possible to invest directly in an index.

U.S. High Yield	<ul style="list-style-type: none"> Only bonds with index rating above B3 2% issuer cap by market value
Emerging Market Sovereign Debt	<ul style="list-style-type: none"> Only USD-denominated sovereign debt Only bonds with index rating between BAA1 and BA3 Intermediate or longer-term maturities of between 5 and 15 years

Performance data quoted represents past performance. Past performance does not guarantee future results. Investment return and principal value of an investment will fluctuate so that an investors' shares, when sold or redeemed, may be worth more or less than the original cost. Current performance data may be higher or lower than actual data quoted. For the most current month-end performance data, please call 888.800.4347.

Market price returns are based on the midpoint of the bid/ask spread at 4:00 pm Eastern time and do not represent the returns an investor would receive if shares were traded at other times. Shares may trade at a premium or discount to the NAV. Returns over one year are annualized. *ETF shares are bought and sold at market price (not NAV) and are not individually redeemed from the fund. Investors buy and sell shares on a secondary market. Only market or "authorized participants" may trade directly with the Fund(s), typically in blocks of 50,000 shares.*

¹Rebalanced and reconstituted monthly. Weightings fixed at rebalance.

Fixed income securities involve interest rate, credit, inflation, illiquidity and reinvestment risks. **Interest rate risk** is the risk that fixed income securities will decline in value because of changes in interest rates. Generally, the value of debt securities falls as interest rates rise. Fixed income securities differ in their sensitivities to changes in interest rates. Fixed income securities with longer effective durations tend to be more sensitive to changes in interest rates, usually making them more volatile than securities with shorter effective durations. Effective duration is determined by a number of factors including coupon rate, whether the coupon is fixed or floating, time to maturity, call or put features, and various repayment features. **Below investment-grade securities, or "junk bonds,"** are more likely to pose a credit risk, as the issuers of these securities are more likely to have problems making interest and principal payments than issuers of higher-rated securities. Lower-rated securities may be more susceptible to real or perceived adverse economic and competitive industry conditions than higher-grade securities, and prices of these securities may be more sensitive to adverse economic downturns or individual corporate developments. If the issuer of the securities defaults, the ETF may incur additional expenses to seek recovery. Generally, rising interest rates tend to extend the duration of **fixed rate mortgage-related securities**, making them more sensitive to changes in interest rates. As a result, in a period of rising interest rates, if the ETF holds mortgage-related securities, it may exhibit additional volatility. In addition, adjustable and fixed rate mortgage-related securities are subject to prepayment risk. Index Funds involve **tracking error and other risks**. In addition to the multi-sector bond strategies employed, the fund may invest in **other securities**, including **private placements**. The Fund may have **portfolio turnover**, which may cause an adverse cost impact. There may be additional **portfolio turnover risk** as active market trading of the fund's shares may cause more frequent creation or redemption activities that could, in certain circumstances, increase the number of portfolio transactions as well as tracking error to the Index and as high levels of transactions increase brokerage and other transaction costs and may result in increased taxable capital gains. **Foreign currency risks** involve risk of capital loss from unfavorable fluctuation in currency values, from differences in generally accepted accounting principles, from economic or political instability in other nations or increased volatility and lower trading volume.

Average Effective Duration: Provides a measure of a fund's interest-rate sensitivity. The longer a fund's duration, the more sensitive the fund is to shifts in interest rates. **Average Effective Maturity:** is a weighted average of all the maturities of the bonds in a portfolio, computed by weighting each bond's effective maturity by market value of the security. **Yield to Worst:** is the lowest potential yield that can be received on a bond without the issuer defaulting.

The 30-day SEC Yield: is an estimate of the fund's rate of investment income reflecting an estimated yield to maturity (assuming all current portfolio holdings are held to maturity), and it may not equal the fund's actual income distribution rate or the income paid to a shareholder's account. The yield shown reflects fee waivers in effect, if any. In the absence of such waivers, yields would be reduced. The yield will reflect an inflation adjustment that is attributable to any inflation-protected securities owned by the fund. This adjustment and the resulting yield can be positive (in the case of inflation) or negative (in the case of deflation).

*The **Bloomberg Barclays U.S. Aggregate Bond Index** is a market-value-weighted index that tracks the daily price, coupon, pay-downs and total return performance of fixed-rate, publicly-placed, dollar-denominated, and non-convertible investment-grade debt issues with at least \$250 million par amount outstanding and with at least one year to final maturity. It is not possible to invest directly in an index.

[†] Bond ratings are divided into categories ranging from AAA (highest) to D (lowest) and are subject to change. The ratings shown are determined by using the middle rating of Moody's, S&P and Fitch, each a third-party rating agency, after dropping the highest and lowest available ratings. When a rating from only two agencies is available, the lower rating is used. When a rating from only one agency is available, that rating is used. When a bond is not rated by one of these agencies, it is designated as Not Rated. Securities designated as Not Rated do not necessarily indicate low credit quality, and for such securities the investment adviser evaluates the credit quality. Holdings of the portfolio other than bonds are categorized under Other. Credit ratings are subjective opinions of the credit rating agency and not statements of fact and may become stale or subject to change. For information on the rating methodology of each agency, please go to: www.moody.com, www.fitchratings.com or www.standardandpoors.com/home/en/us.
